

The diagram illustrates a complex causal network with the following variables and relationships:

- Variables:** commute, phq2, active_mobility, temp, dew_point_std, dew_point, temp_humidity_std, weather_means, cloud_cover_std.
- Self-loops (Diagonal Edges):**
 - commute: 0.09
 - phq2: 0.24
 - active_mobility: 0.22
 - temp: 0.27
 - dew_point_std: 0.68
 - dew_point: 0.19
 - temp_humidity_std: 0.63
 - weather_means: 0.53
 - cloud_cover_std: 0.22
- Key Directed Edges (Off-Diagonal):**
 - commute to temp: 0.01
 - commute to active_mobility: 0.04
 - commute to dew_point_std: 0.03
 - commute to dew_point: 0.03
 - commute to temp_humidity_std: 0.02
 - commute to weather_means: 0.02
 - commute to cloud_cover_std: 0.02
 - phq2 to temp: 0.05
 - phq2 to dew_point_std: 0.05
 - phq2 to dew_point: 0.05
 - phq2 to temp_humidity_std: 0.05
 - phq2 to weather_means: 0.05
 - phq2 to cloud_cover_std: 0.05
 - active_mobility to temp: 0.02
 - active_mobility to dew_point_std: 0.02
 - active_mobility to dew_point: 0.02
 - active_mobility to temp_humidity_std: 0.02
 - active_mobility to weather_means: 0.02
 - active_mobility to cloud_cover_std: 0.02
 - temp to dew_point_std: 0.4
 - temp to dew_point: 0.05
 - temp to temp_humidity_std: 0.05
 - temp to weather_means: 0.05
 - temp to cloud_cover_std: 0.05
 - dew_point_std to dew_point: 0.05
 - dew_point_std to temp_humidity_std: 0.05
 - dew_point_std to weather_means: 0.05
 - dew_point_std to cloud_cover_std: 0.05
 - dew_point to temp_humidity_std: 0.14
 - dew_point to weather_means: 0.05
 - dew_point to cloud_cover_std: 0.05
 - temp_humidity_std to weather_means: 0.05
 - temp_humidity_std to cloud_cover_std: 0.05
 - weather_means to cloud_cover_std: 0.05

[illegible]

The diagram illustrates a complex causal network with 10 nodes and numerous directed edges. The nodes are arranged in a circular pattern. The edges are color-coded: red for negative correlations and blue for positive correlations. The weights on the edges range from -0.41 to 0.59. Self-loops are present on all nodes, with weights ranging from 0.14 to 0.75.

Nodes: commute, active_mobility, cloud_cover_std, weather_means, temp_humidity_std, dew_point, dew_point_std, temp, phq2, commute.

Key Edges (Weights):

- commute to active_mobility: 0.14
- active_mobility to cloud_cover_std: 0.26
- cloud_cover_std to weather_means: 0.23
- weather_means to temp_humidity_std: 0.58
- temp_humidity_std to dew_point: 0.75
- dew_point to dew_point_std: 0.21
- dew_point_std to temp: 0.59
- temp to phq2: 0.29
- phq2 to commute: 0.34

Key Edges (Weights):

- commute to active_mobility: 0.14
- active_mobility to cloud_cover_std: 0.26
- cloud_cover_std to weather_means: 0.23
- weather_means to temp_humidity_std: 0.58
- temp_humidity_std to dew_point: 0.75
- dew_point to dew_point_std: 0.21
- dew_point_std to temp: 0.59
- temp to phq2: 0.29
- phq2 to commute: 0.34

The diagram illustrates a structural equation model with the following paths and coefficients:

- commute** to **phq2**: -0.03 (red arrow)
- commute** to **active_mobility**: -0.06 (red arrow)
- temp** to **dew_point_std**: 0.04 (blue arrow)
- temp** to **temp_humidity_std**: 0.02 (blue arrow)
- phq2** to **active_mobility**: 0.22 (blue arrow)
- dew_point_std** to **active_mobility**: 0.08 (blue arrow)
- dew_point** to **temp_humidity_std**: 0.02 (blue arrow)
- cloud_cover_std** to **active_mobility**: -0.01 (red arrow)
- weather_means** to **active_mobility**: -0.01 (red arrow)
- temp_humidity_std** to **temp_humidity_std**: -0.12 (red self-loop arrow)
